Multiplex ALL -4

Catalog No.: ALL-4.1, 25 Reactions
ALL-4.2, 25 Reactions
ALL-4.3, 25 Reactions

Product Specifications

Multiplex ALL-4 probe is a multicolored chromosome mix which consists of six chromosomes labeled with a predominant color scheme. Telomeres and pericentromeric regions on each chromosome are labeled with spectrally distinct fluorochrome. The mix is viewed three chromosomes at a time using dual filters. This design detects all numerical and structural abnormalities related to B- and T-cell Acute Lymphocytic Leukemia (ALL).

Three variations of the Multiplex ALL-4 Probe mix are offered:

- ALL-4.1 Instant 15 minute Hybridization
- ALL-4.2 Rapid 3 hour Hybridization
- ALL-4.3 Overnight 16-21 hour Hybridization

Multiplex ALL-4 probe hybridized to a metaphase and captured with the Red/Green dual filter.

ASR: Analyte Specific Reagent, analytical and performance characteristics are not established.

Multiplex ALL -4

Catalog No.: ALL-4.1, 25 Reactions
ALL-4.2, 25 Reactions
ALL-4.3, 25 Reactions

ALL-1 Color Pattern	Chromosome
Red	7
Green	16
R/G Hybrid	13
Gold	3
Aqua	18
Y/A Hybrid	15

Multiplex ALL-4 probe hybridized to a metaphase and captured with the Gold/Aqua dual filter.

ASR: Analyte Specific Reagent, analytical and performance characteristics are not established.
