HR Chromosome 20

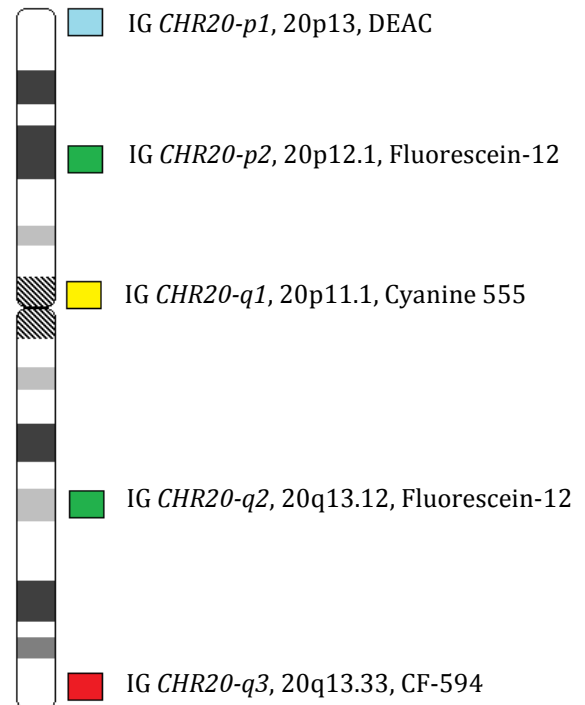

Catalog No.: HR-20.1, 25 Reactions
HR-20.2, 25 Reactions
HR-20.3, 25 Reactions

Product Specifications

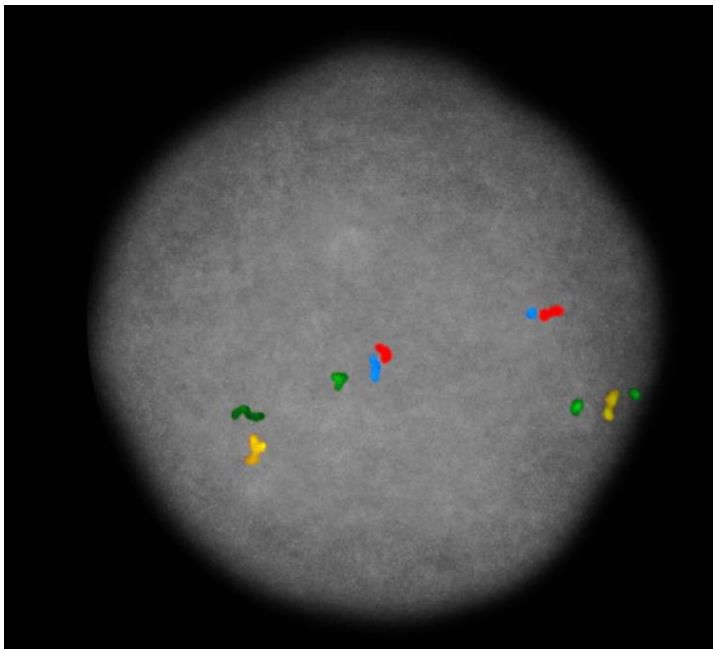

High Resolution Chromosome 20 probe is a multicolored chromosome mix which detects all numerical abnormalities and most balanced and unbalanced structural aberrations, including characterization of “add” and “marker” chromosomes. The labeled targets are equidistantly assigned down the length of chromosome 20.

Three variations of the HR Chromosome 20 Probe mix are offered:

- HR-20.1 Instant 15 minute Hybridization
- HR-20.2 Rapid 3 hour Hybridization
- HR-20.3 Overnight 16-21 hour Hybridization

Not drawn to scale.

HR Chromosome 20 probe mix hybridized to a lymphocyte.

ASR: Analyte Specific Reagent, analytical and performance characteristics are not established.
