HR Chromosome 21

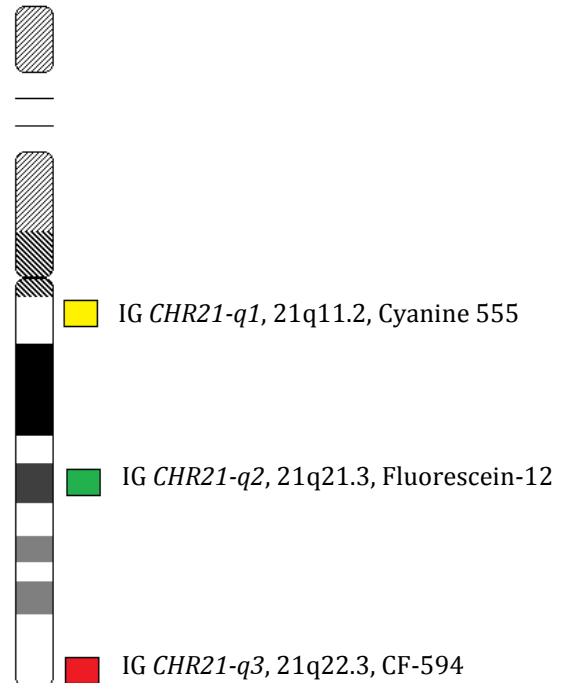

Catalog No.: HR-21.1, 25 Reactions
HR-21.2, 25 Reactions
HR-21.3, 25 Reactions

Product Specifications

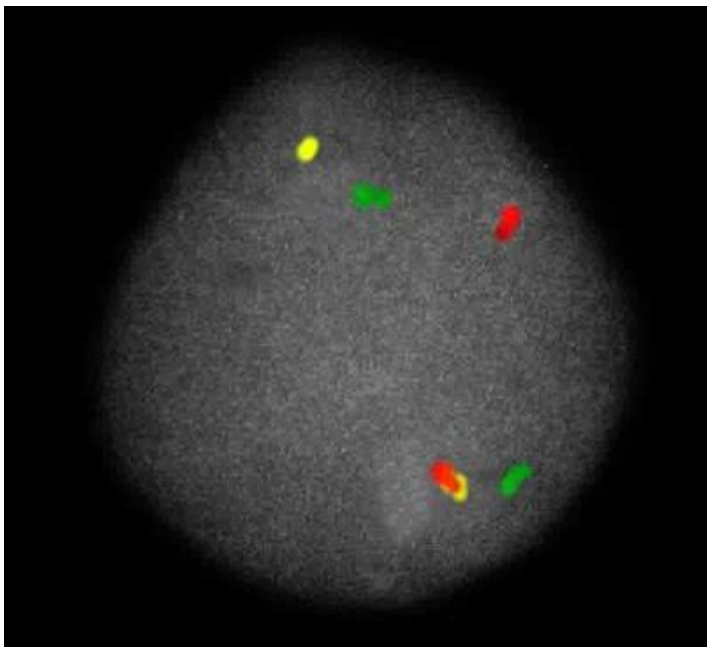

High Resolution Chromosome 21 probe is a multicolored chromosome mix which detects all numerical abnormalities and most balanced and unbalanced structural aberrations, including characterization of “add” and “marker” chromosomes. The labeled targets are equidistantly assigned down the length of chromosome 21.

Three variations of the HR Chromosome 21 Probe mix are offered:

- HR-21.1 Instant 15 minute Hybridization
- HR-21.2 Rapid 3 hour Hybridization
- HR-21.3 Overnight 16-21 hour Hybridization

Not drawn to scale.

HR Chromosome 21 probe mix hybridized to a lymphocyte.

ASR: Analyte Specific Reagent, analytical and performance characteristics are not established.
