Multiplex ALL -5

Catalog No.: ALL-5.1, 25 Reactions
ALL-5.2, 25 Reactions
ALL-5.3, 25 Reactions

Product Specifications

Multiplex ALL-5 probe is a multicolored chromosome mix which consists of five specific regions labeled with a particular color. This design detects common microdeletions and duplications related to B- and T-cell Acute Lymphocytic Leukemia (ALL).

Three variations of the Multiplex ALL-4 Probe mix are offered:

- ALL-4.1 Instant 15 minute Hybridization
- ALL-4.2 Rapid 3 hour Hybridization
- ALL-4.3 Overnight 16-21 hour Hybridization

	Mix 5
Red	9p21.3
Green	6q21
Red/Green Hybrid	13q14.2
Gold	21q22.12
Aqua	Xp22.33

Multiplex ALL-5 probe hybridized to an interphase cell with a deletion at 13q14 (RB1).

Multiplex ALL-5 probe hybridized to an interphase cell with a duplication of the 21q22 region (RUNX1).

ASR: Analyte Specific Reagent, analytical and performance characteristics are not established.
